CERTIFICATE of COMPLIANCE – RoHS DECLARATION

To Whom it may Concern:

Conxall certifies that all catalog part numbers comply with the definitions given in the EU Directive, 2002/95/EC, entitled "Restriction of Hazardous Substances" (RoHS) and all subsequent amendments.

In addition, Conxall reserves the right to make material substitutions in Conxall products which will not impact any part of the EU RoHS Directive.

Conxall ensures that those part numbers listed herein do not contain more than 0.1 percent by weight of lead, mercury, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE) and 0.01 percent by weight of cadmium per homogeneous material. When lead is used as an alloying element in metals the maximum is up to 4% by weight in copper; 0.4% in aluminum, and 0.35% in steel alloys.

Conxall also complies with the European Court of Justice July 1, 2008 decision to nullify the decabromodiphenyl ether (Deca-BDE) exemption to the EU RoHS Directive.

Conxall has implemented a comprehensive system for obtaining supplier declarations and material disclosures concerning the chemical composition of all components and products designed. However, Conxall relies on the RoHS Certifications of the Conxall supplier base for all RoHS compliance requirements. Conxall does not conduct independent audits or verifications of the supplier documents for RoHS Compliance.
